List of Scientific and Professional Papers
on biological activity of Agrostemin published in country and abroad
between 1954 and 1989
(by chronological order)

The list consists of just a portion of published papers. The sole purpose is to present
the volume of research on effects of Agrostemin, namely, what was achieved and
published in relevant scientific publications. The criteria used were just the existence
of the paper itself and chronology. The list is not complete and every suggestion and
new information would be precious.
